The logo graphic consists of a thick, red, curved line that starts from the left, arches over the word 'Artesis', and ends on the right. The word 'Artesis' is written in a bold, black, sans-serif font. Below it, the website address 'www.artesis.com' is written in a smaller, black, sans-serif font.

Artesis Condition Monitoring Systems

Predictive maintenance and Energy Efficiency Solutions

Artesis
Simplifies Predictive Maintenance

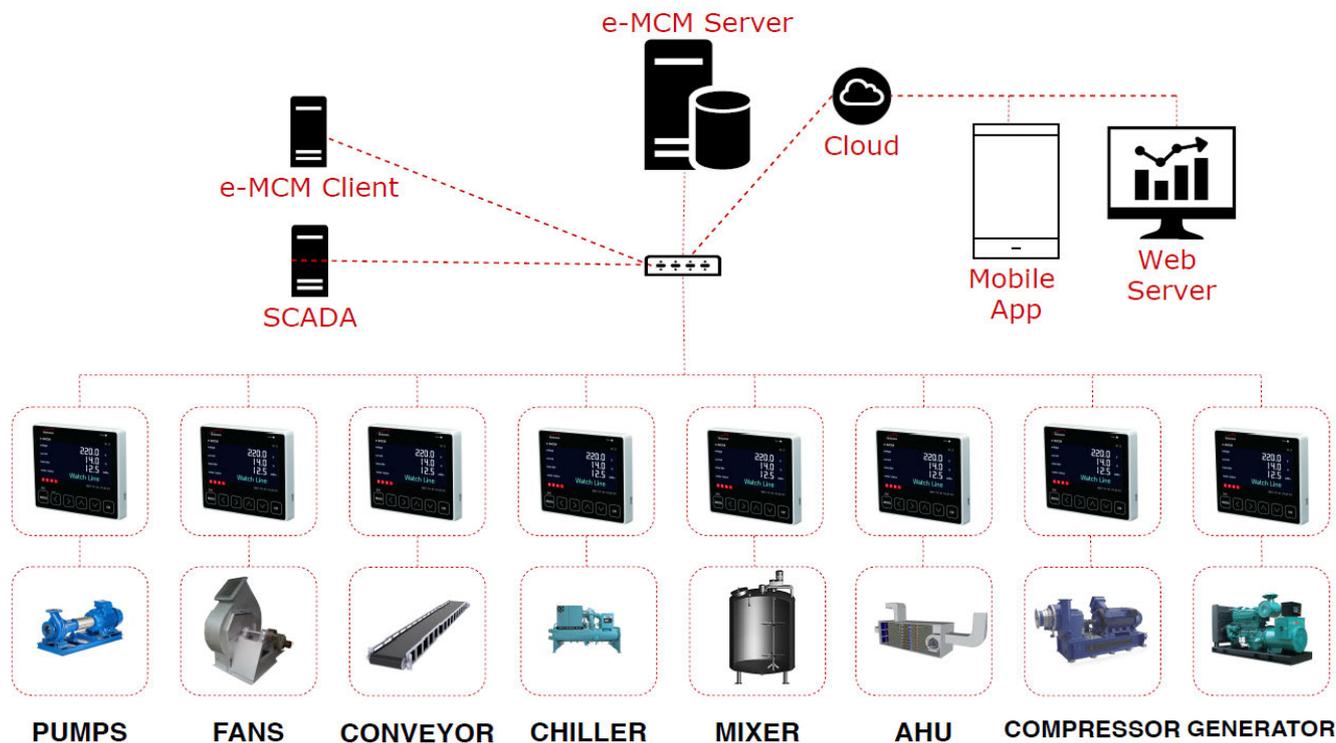

e-MCM is a powerful online condition monitoring, predictive maintenance and power meter tool intended for critical AC rotating equipment. The patented machine learning algorithm of e-MCM enables comprehensive fault detection up to 6 months in advance. This allows the Artesis system to provide concise information answering the following key questions:

What's wrong?

What do I have to do?

How soon do I have to do it?

- Simple interface providing actionable information via automated fault diagnosis capability
- Comprehensive fault coverage by monitoring electrical, mechanical and process conditions of rotating equipment
- On remote or inaccessible equipment which is difficult to monitor with other technologies
- In hazardous or extreme environments where sensors cannot be mounted to the equipment
- Integration packages are available to a wide range of 3rd party systems, including Integrated Condition Monitoring, SCADA/HMI, and Reporting/Business Intelligence

Windows Client Software

Diagnostic Parameters	Status	Name	Value	Reference
Loose Foundation / Components	OK	Ir rms	227.543	100 ± 10%
Unbalance/Misalignment/Coupling/Bearing	OK	Ir ms	12.129	≤ 10
Transmission Element / Driven Equipment	OK	Voltage balance	0.215	≤ 2.0
Bearing Parameter	OK	Current balance	2.775	≤ 5.0
Rotor	OK	Power factor	0.669	
Loose Windings / Stator / Short Circuit	OK	Active power	5.417	
Internal Electrical Fault	OK	Signal/Frequency	49.994	
External Electrical Fault	OK	THD	2.57	≤ 5.0
Other	OK	Reactive power	6.025	

Detected Faults and Warnings	Effects on Energy Efficiency (kWh)
Motor Load	7514
TOTAL	7514

Detected faults and their effects on energy efficiency
Corrective maintenance action will save energy up to 7514 kWh per year, increase productivity, reduce maintenance cost, and increase equipment life time.

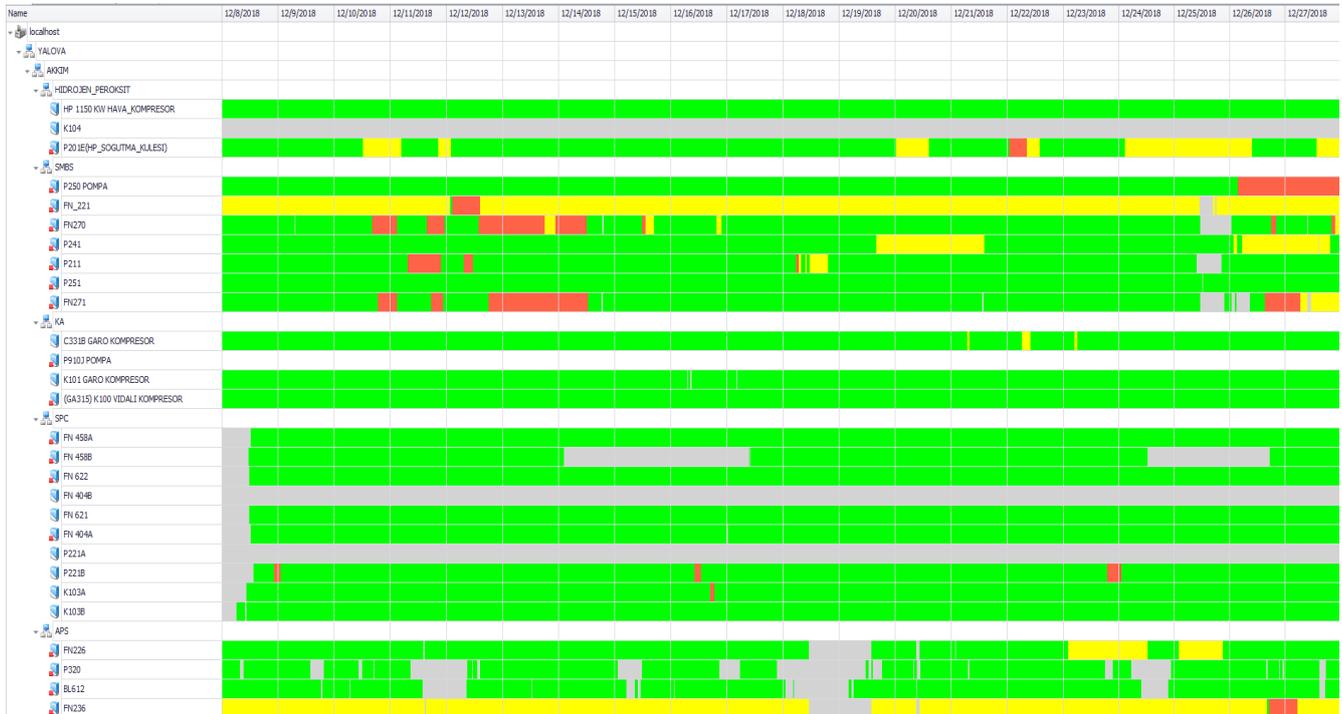

Equipment is working as expected.

Products

ITEM	e-MCM	AMT
Product		
Monitoring Type	Online Real time continuous monitoring	Portable Diagnostic Tool
Application	<i>Low voltage (up to 690V), High voltage (690V - 12000V), Inverter</i>	
Function	Online Motor condition monitoring + Analysis S/W + Power monitoring	Motor diagnosis + Analysis S/W
Monitor	LED Alarm (Normal, Fault), Communication Alarm, Software - Trend Viewer	AMT S/W Report
Feature	Predictive maintenance and fault diagnosis at economical price Energy-saving monitor with power analysis function	Easy Portable diagnostic tool Compatible with Low Voltage, High Voltage, inverter driven motors
Detectable faults	Mechanical unbalance/misalignment Loose foundation Gearbox, belt, coupling Bearing Cavitation, air flow disturbance Stator and rotor faults Motor electrical faults Energy Measurement : V (L-N, L-L) , A, Hz, PF, Unbalance, Power(P,Q,S),	Mechanical unbalance/misalignment Loose foundation Gearbox, belt, coupling Bearing Cavitation, air flow disturbance Stator and rotor faults

Motor fault diagnosis

	Name	Description
Electrical diagnosis	Internal Electrical Fault	Internal electrical fault : rotor / stator, short circuit, insulation, winding
	External Electrical Fault	External electrical fault: Check cable, MC, MCCB accessories and motor wiring
Mechanical diagnosis	Loose Foundation, Component	Loose motor foundation, loose motor components, looseness or excessive tolerances in driven components
	Unbalance, Misalignment	Misalignment, unbalance, bearing, coupling, and motor shaft
	Transmission Element, Driven Equipment	Transmission element(s) coupling, driven equipment, belt, pulley, gear box, and fan / pump impeller
	Bearing	Check bearing
	Rotor	Cracking of the rotor or loosening of the rotor / rotor bar
	Stator related problem	Stator, short circuit, winding looseness, insulation, partial discharge
Load diagnosis	Other Watch Line	Temporary changes in supply voltage cause this alarm. If alarm is persistent check for harmonic levels, capacitors, isolation of cables, motor connector or terminal slackness, loose contactors, etc.
	Watch Load	If the process load has not been altered deliberately, check for leakage, valve & vane adjustment, pressure gauge faults, manometer, dirty filters (fans, compressors). If the process is altered deliberately, device should be updated.

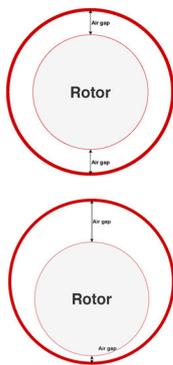

Power meter

	Item	Description
Measurement	Voltage(V) Current (A) Power Factor Frequency (Hz) Power (W) Energy (Wh) Unbalance Leakage Current Sag/Swell THD Harmonic	690V Line-to-line voltage (L1-L2, L2-L3, L3-L1) L1, L2, L3 -99.9 to 100% (PF) 45 - 65 Hz Active/Reactive/Apparent Power Active/Reactive/Apparent Energy Voltage/Current unbalance Over 5mA Leakage current monitoring Min. 1/2 cycle Voltage/Current THD Up to 31 harmonics
Analysis	Analyze equipment efficiency Notify device abnormality Analyze consumption pattern Provide operational strategy	Detailed monitoring, total amount analysis Usage forecasting, real time management, predictive usage analysis Peak power analysis, cumulative usage analysis, comparative graph Performance report, customer report

HOW DOES IT WORK?

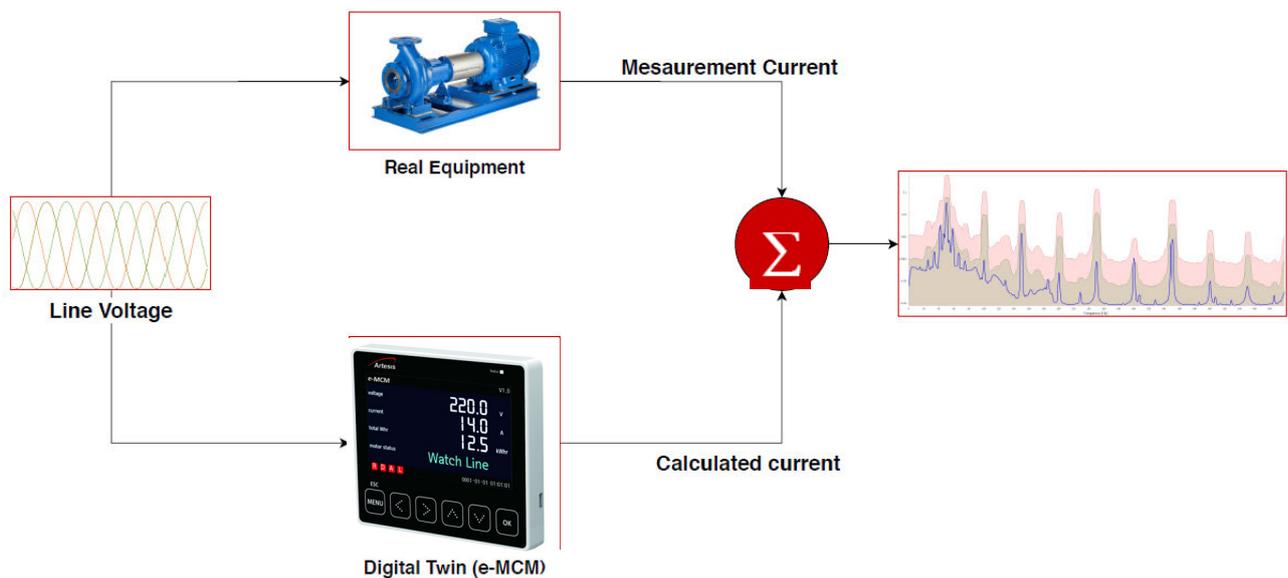

MODEL BASED FAULT DETECTION

This model-based approach works on the principle that the current drawn by an electric motor is affected by not only the applied voltage but also the behavior of both the motor and the driven equipment. It identifies the distortions of the current waveform that have not been caused by distortions on the voltage waveform and therefore must have been caused by the behavior of the motor and driven equipment system. The frequency of these distortions indicates the nature of the cause, and the magnitude of the distortions indicates the severity of the cause.

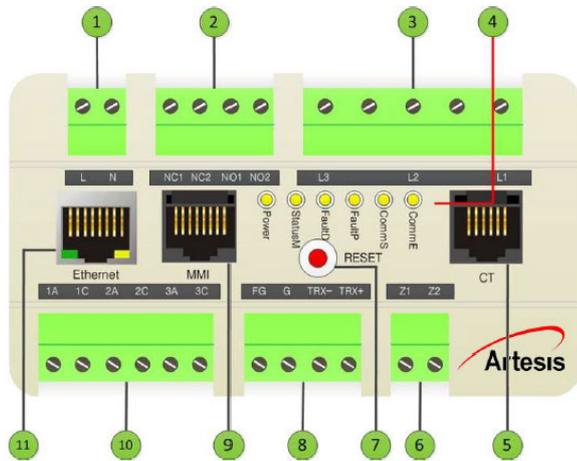

Developing faults in the motor or in the equipment connected to it affect both the air gap and torsional dynamics between the motor stator and rotor.

These sensitive variations change the relationship between the motor input and the output signals that are then used by Artesis MCM to detect and diagnose faults.

Model-based approach analyzes the «residual current» – the distortions on the current waveform that have not been caused by distortions on the voltage waveform. This eliminates the dominant supply frequency, and focuses on the signals that indicate the faults right across the spectrum.

e-MCM Motor Condition Monitoring System

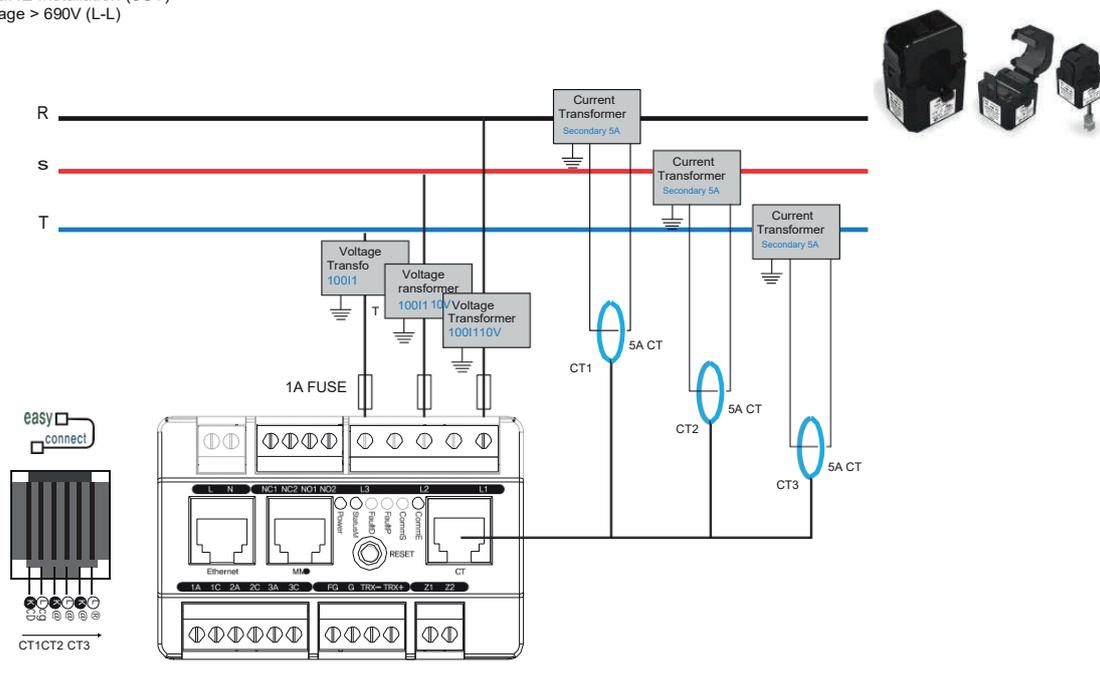

Motor fault diagnosis + Energy management
Predictive Diagnosis of Electrical and Mechanical Faults
(3-phase AC motor) Energy meter function
Measuring parameters : V (L-N, L-L), A, Hz, PF, THD Unbalance, Power
Support Panel display monitor (4.3 TFT LCD monitor)
RS485 serial communication and Ethernet communication support
EN 60255-26: 2013, EN61010-1: 2010, EN61326-1: 2006
Compact size (94 x 63 x 100 mm)
DIN rail and wall mount available

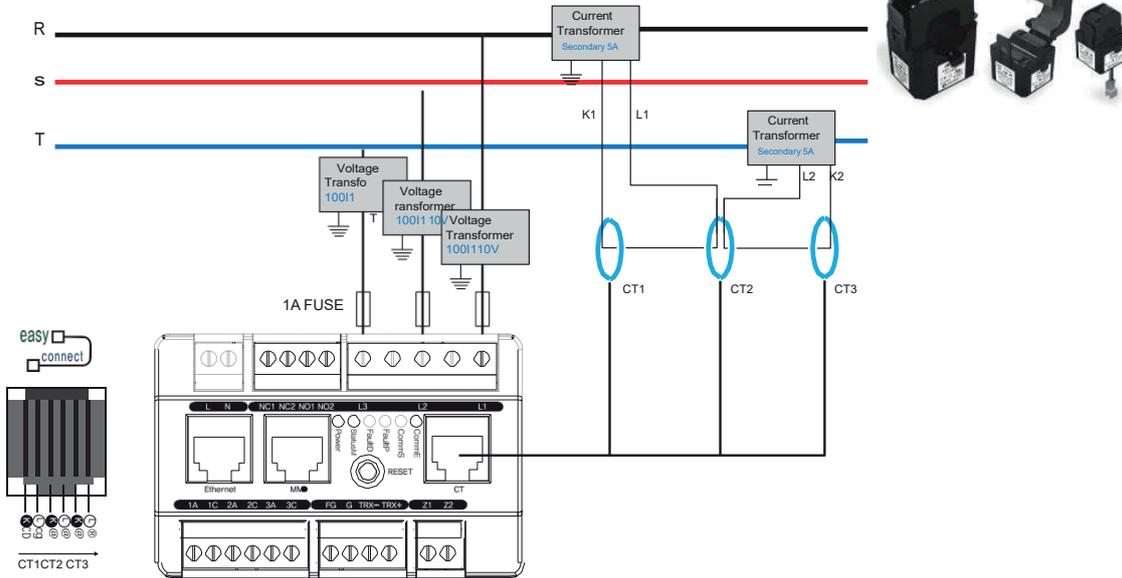

No	Name	Function
1	Supply voltage terminal	Terminal for operational power (AC100~240V)
2	Empty terminal	No Function
3	Motor voltage input	Terminal for motor input voltage
4	Status LED	Indicates Power status, Module status, etc.
5	CT connection port	Terminal for 3 phase CT connection (RJ11)
6	ZCT connection port	Terminal for ground CT connection
7	Reset button	Trip Relay Reset Button
8	RS-485 terminal	Terminal for RS-485 communication
9	HMI terminal	Terminal for connecting with HMI (RJ45)
10	Empty terminal	No Function
11	Ethernet port	Terminal for ethernet communication (RJ45)

e-MCM MV/HV Installation

MV/HV - LINE Installation (3CT)
 Motor Voltage > 690V (L-L)

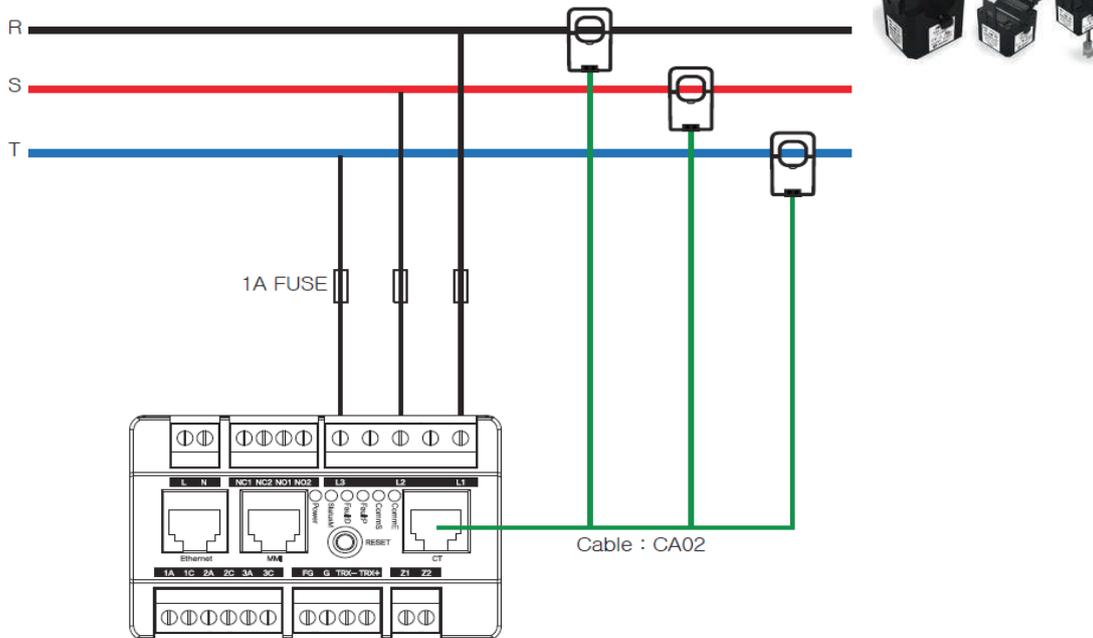

HV - LINE Installation (2CT)
 Motor Voltage > 690V (L-L)

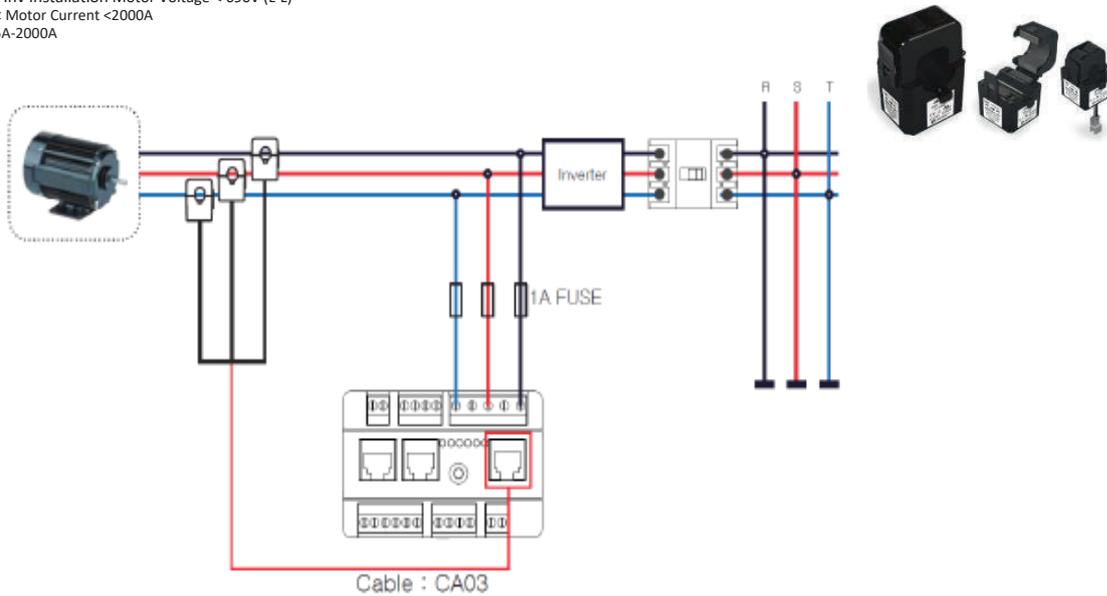

e-MCM LV Installation

LV - LINE Installation Motor Voltage < 690V (L-L)
 5A < Motor Current < 2000A
 CT: 5A-2000A

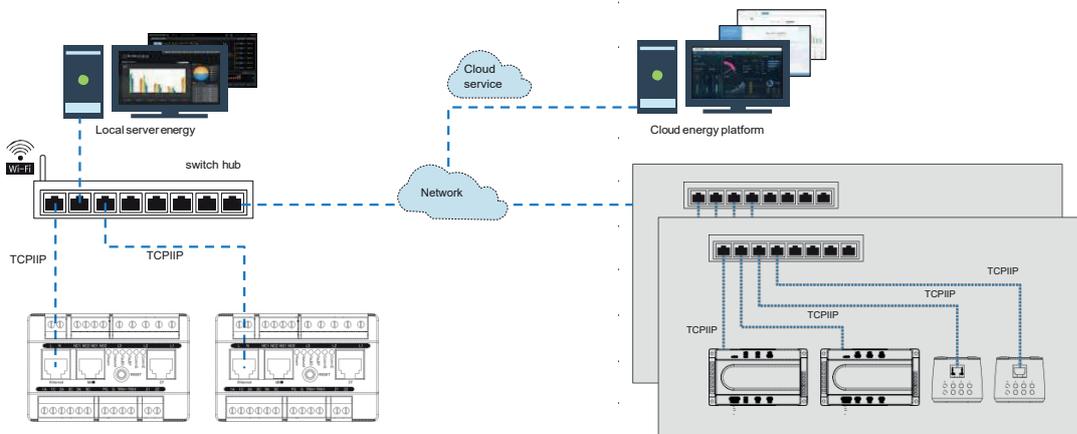

LV - Inv Installation Motor Voltage < 690V (L-L)
 5A < Motor Current < 2000A
 CT:5A-2000A

Note: The maximum number of connected devices is limited to 16 other data communication.

Accessory- Split Core Current Transformers

Product Model	Description
	
AC10R-5-100mA (10.2 Ø)	3x5A -Splitcore current transformers set, (Ø10.2mm) 5A:100mA
AC10R-10-100mA (10.2 Ø)	3x10A -Splitcore current transformers set, (Ø10.2mm) 10A:100mA
AC10R-20-100mA (10.2 Ø)	3x20A -Splitcore current transformers set, (Ø10.2mm) 20A:100mA
AC10R-30-100mA (10.2 Ø)	3x30A -Splitcore current transformers set, (Ø10.2mm) 30A:100mA
AC10R-60-100mA (10.2 Ø)	3x60A -Splitcore current transformers set, (Ø10.2mm) 60A:100mA
	
AC25R-100-100mA (25 Ø)	3x100A -Splitcore current transformers set, (Ø25mm) 100A:100mA
AC25R-200-100mA (25 Ø)	3x200A -Splitcore current transformers set, (Ø25mm) 200A:100mA
AC25R-250-100mA (25 Ø)	3x250A -Splitcore current transformers set, (Ø25mm) 250A:100mA
	
AC25R-300-100mA (35 Ø)	3x300A -Splitcore current transformers set, (Ø35mm) 300A:100mA
AC25R-400-100mA (35 Ø)	3x400A -Splitcore current transformers set, (Ø35mm) 400A:100mA
AC25R-600-100mA (35 Ø)	3x600A -Splitcore current transformers set, (Ø35mm) 600A:100mA
	
AC51R-400-100mA (51 Ø)	3x400A -Splitcore current transformers set, (Ø51mm) 400A:100mA
AC51R-600-100mA (51 Ø)	3x600A -Splitcore current transformers set, (Ø51mm) 600A:100mA
AC51R-800-100mA (51 Ø)	3x800A -Splitcore current transformers set, (Ø51mm) 800A:100mA
	
AC80R-1000-100mA (80 Ø)	3x1000A -Splitcore current transformers set, (Ø80mm) 1000A:100mA
AC80R-1500-100mA (80 Ø)	3x1500A -Splitcore current transformers set, (Ø80mm) 1500A:100mA
	
AC105R-1200-100mA (105 Ø)	3x1200A -Splitcore current transformers set, (Ø105mm) 1200A:100mA
AC105R-2000-100mA (105 Ø)	3x2000A -Splitcore current transformers set, (Ø105mm) 2000A:100mA

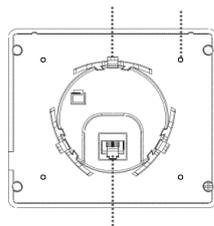

Accessory - Touch Panel

Panel Display Monitor with 4.3" TFT LCD

- Used as field monitoring
- On-site power monitoring
- Clear display with 4.3" TFT LCD
- Connect and use with e-MCM device without separate power supply
- Possible to change the setting of the device in the field
- Easy operation with large touch keys

Terminal Description

- 1 LCD screen 4.3" TFT Color LCD
- 2 Status LED Indication of operation status
- 3 Six keys are used to select display and set
- 4 Installation Clip The clips are used for fixing the PDM to the panel
- 5 Communication Communication output to master device (terminal)
